

14 LIFE BELOW WATER

LIFE BELOW WATER

“Protect and secure oceans, seas, and other water resources for sustainable development”

Facts

- Half of the world's oxygen is provided by oceans.
- The world's largest ecosystem offers food for more than 1 milliard people.
- In less than 40 years global wild animal population dropped to 60%.

There is much to do:

- Listen to the world's youngsters encouraging us to do more to prevent climate change and protect our planet.
- Major cooperation between states and individuals to reduce the level of carbon dioxide.
- Protection of oceans must start with the prevention and restoration of coastal forests which absorb carbon dioxide, prevent global warming and increase the fish population.
- Businesses should take responsibility to protect the oceans. They should take action to reduce carbon dioxide levels by reducing the use of plastics or providing technology products that protect nature.
- Increase taking volunteering actions to protect seas and oceans.

Did you know?

- Adidas aims to sell 1 million trainers made from recyclable plastic
- Over 90% of the world's trade is maritime trade.

15 LIFE ON LAND

LIFE ON LAND

“Let's protect and promote good use of terrestrial ecosystem, sustainable forests, prevent deforestation and protect the land.”

A biological system is a group of living beings that coexist and interact with each other in a natural environment where they cohabit. There are some kinds of ecosystems on the planet, each of which has its characteristics flora, and fauna conditioned by its geology and environment.

1. Terrestrial ecosystems
2. Marine ecosystems
3. Freshwater ecosystems
4. Desert ecosystems
5. Mountain ecosystems
6. Forests ecosystems

Planning in Balkan Regions project.

SUSTAINABLE
DEVELOPMENT
GOALS

Sustainable Development Goals (SDG)

In 2015, members of the United Nations were gathered to adopt the Sustainable Development Agenda 2030 in order “to enable a mark for peace and prosperity for the mankind and the planet, in the present and future” so they came out with Sustainable Development Goals part of Sustainable Development Agenda 2030.

The Sustainable Development Goals (SDG) that Water and Sanitation Safety Planning in Balkan Regions addresses and aims to effect are:

1 NO POVERTY

“Donate things not useful for you anymore”

According to United Nations, the definition of poverty is: poverty goes beyond lack of income and resources to secure a sustainable life. Its manifestations include hunger and malnutrition; restriction of education and other fundamental services; discrimination and social exclusion; lack of participation in decision-making.

Did you know?

9-10% of humans in the whole world are poor, meaning they survive with less than 1.6 euros per day

How can we contribute?

- Donate a meal for people in need.
- Our meal portions must be as much as we need.
- Donate a book or magazine.
- Donate previous schoolyear books.
- Invite friends to different social and cultural activities

3 GOOD HEALTH AND WELL-BEING

GOOD HEALTH AND WELL-BEING

“Ensure a healthy life and welfare for all ages.”

Tips:

- Keep up your personal hygiene
- Use clean water
- Eat well
- Keep active
- Sleep well

4 QUALITY EDUCATION

“Equal and inclusive education that offers the same opportunities for everyone.”

According to UNICEF, 100 million children aren't able to attend school. These statistics are published by UNICEF, whereas 40% of them live in extreme poverty. The number of illiterate adults is around 800 million, whereas most are women.

QUALITY EDUCATION

6 CLEAN WATER AND SANITAT

“Every government must secure high-quality water and sustainable sanitation for every citizen.”

Water supplies and resources are important only when is sufficiently accessible to customers in residential community and institutions, public services, and industrial and agricultural objects. Modern clean, filtration and distribution water systems must be safe and secured to help prevent and stop sickness and disease caused by dirty water.

CLEAN WATER AND SANITAT

7 AFFORDABLE AND CLEAN ENERGY

AFFORDABLE AND CLEAN ENERGY

“Ensure modern, sustainable, and affordable energy for every human being by encouraging and promoting recyclable energy.”

Facts

- Most of the energy consumed comes from fossil fuels.
- 81% of the total energy consumed on Earth comes from oil, coal, and gas.
- Energy consumption increases every year. It is estimated that by 2035, consumption will increase by 35%.
- Only 2% or 3% of the energy consumed comes from clean energy sources.

13 CLIMATE ACTION

“We act immediately and concretely, to reduce climate change and its consequences”.

CLIMATE ACTION

Facts

Western Balkan is one of the regions in Europe most affected by climate change, which is predicted to continue with temperature increase to 1.7- 4.0 °C, also overcoming 5.0 °C by the end of the century.

What can we do?

- Promote and use green energy
- Avoid the use of personal transport when possible
- Use bicycles and long walks.
- Plant different kinds of tree
- Smart use of energy
