# Transforming gender relations and turning to sustainable resource use in the Kilum-Ijim Forests of Cameroon

**Description of the project:** CAMGEW engages local and ethnic women in sustainable forest management, while enhancing their human and socio-economic rights and transforming patriarchal gender relations. Cooperating with Oku local authorities and the government of Cameroon, CAMGEW gives women the opportunity to assume leadership positions of forest institutions and stakeholder platforms. They provide trainings to over 2,000 people : environmental education for schools and adults, bee farming, agroforestry and organic farming, small livestock breeding and biogas production, entrepreneurship skills with financial assistance. This initiative helps 800 young women fight domestic violence through counseling on their rights and community sensitization to counter early marriages.

**Climate impact:** Training in agroforestry for 772 community members, two-thirds women, prevents soil erosion and deforestation, while responding to domestic food needs. Three plant nurseries provided farms at the forest periphery with 150,000 saplings. Forest education was imparted in schools, through social media, radio, social gatherings, men's clubs. 240 Mbororo women gained skills on organic farming to improve fodder for their cattle and sheep, reducing farmer-grazer conflicts. 900 bee hives donated to farmers guard health of the forest.

**Gender impact:** CAMGEW applies gender mainstreaming across all it's activities: agroforestry and organic farming with cattle breeding, plant nurseries, bee-keeping, business skills trainings for 1580 women; giving loans to 1,325 of them. Counseling 800 victims of domestic violence and sexual abuse -including teenage mothers and HIV/AIDS infected- on their social rights, and empowering them with business skills and advice on nutrition and health, working on legalization of marriages, CAMGEW transforms the gender relations in patriarchal Mbororo communities.

**Scalability / replicability:** The project is a model of constructive cooperation and knowledge sharing with local and national public authorities and a broad range of stakeholders -research institutes, foundations, NGOs- making it replicable and scalable. Train the trainer scheme with use of local experts, enhances continuous learning and sustainability of this model. There are, for example, exchange visits between honey cooperatives and bee farmer groups. The Honeyshop is a demonstration centre for research, learning and marketing.
