

Gender mainstreaming during the war in Ukraine

2022

Project summary

Ecoclub is an energy-oriented environmental protection NGO. Their mission is to create a future with **green energy** by empowering citizens and communities and **influencing policy**. With this project, they aim towards putting Ukraine on the path of sustainable development rather than returning to the pre-war state. Central in this are **women's leadership**, gender sensitivity, and inclusiveness in the post-war reconstruction.

Olya Dytyuk

She read the manual "Climate Change Adaptation for Communities: A Quick Guide for Communities" 23, resident of Rivne community

“After reading the manual, I realized why climate change adaptation in the community is important and how it directly affects my life. In addition, I watched the recording of the webinar held by the Ecoclub and realized that as a community resident, I can demand from the local authorities to implement climate change adaptation measures. I believe that the Ecoclub's guide is a great instruction for the Rivne community on where to move and how to adapt to climate change. This is necessary for me and other community residents to live in safety and comfort.”

Achievements

As part of the project, Ecoclub organised **8 webinars** conducted by women leaders. These webinars were related to topics such as gender equality, energy transition, climate change and the post-war development of Ukraine.

Ecoclub interviewed a number of women working on environmental issues. The stories of these **6 women** were highlighted on their website.

Ecoclub representatives are members of the working groups that contributed to developing the **Ukraine Recovery Plan** of the National Council for the Reconstruction of Ukraine. As part of these working groups, Ecoclub representatives promote **gender balance** and inclusiveness in the preparation of recovery of Ukraine.

Ecoclub prepared and distributed a **publication** highlighting the importance of gender balance and inclusion in Ukraine's post-war reconstruction
